EDUCATION

**State University of
Telecommunications**
MSc, Computer Science · 2021–
2023
**Igor Sikorsky Kyiv Polytechnic
Institute**
BSc, Computer Science · 2017–
2021
Dubex, Denmark
Cyber Academy, 3-month
programme · 2022

PROFILE

Security Engineer with 5+ years across SOC L1–L3, incident response and DFIR, detection engineering and External Attack Surface Management. Build production security tooling and automation, including a web platform built on top of a CLI-only attack-surface scanner, covering 2,000+ client organisations and 15,000+ tracked assets. Apply LLM/MCP and agentic workflows to security automation and engineering.

EXPERIENCE

Security Engineer, EASM & Automation Jul 2021 — present · 5 yr 2 mo
Confidential (NDA) · national-level CSIRT

- Progressed from SOC L1/L2/L3 into security engineering — alert triage, incident response, DFIR, threat hunting, detection engineering and SIEM operations.
- Sole developer of a web platform built on top of an open-source CLI attack-surface scanner: scan configuration and scheduling, run management, findings analysis, report generation and export — turning an operator-only tool into a product used across the team.
- Operate external attack-surface monitoring across 2,000+ client organisations and 15,000+ tracked assets.
- Authored ~20 global correlation rules plus a large set of client-specific detections across ~40 log sources, feeding L1/L2 triage.
- Automate alert triage, scanner-result analysis and dynamic client dashboard generation with LLM and agentic workflows — task decomposition, tool use, verification and human oversight rather than one-shot prompting.

SELECTED WORK

-  **Competitive CTF**
Regular player on a high-performing team with multiple winning placements at international competitions; focus on blue and purple team work, DFIR and AI-assisted problem solving. Built tooling for attack/defense formats: service analysis, exploit analysis and generation, exploit validation and automated flag submission.
-  **Can Frontier Models Reverse-Engineer Malware? — ARIMLABS, 2026**
Named co-author of a benchmark evaluating seven frontier models on static malware analysis: 12 samples, 121 statically-recoverable indicators, 252 evaluation runs.
-  **Guest SME and speaker**
Hands-on AV/EDR/XDR session at SET University using CrowdStrike and ELK endpoint telemetry; conference talk on applying AI to security operations.
-  **Independent engineering**
Personal web and security-automation projects, n8n workflows, AI-assisted development with LLM agents and MCP.
